

PILECAP

STEEL PILE REPAIR SYSTEM

PILECAP, Inc. offers the strongest structural repair in the marine industry for application on steel piling regardless of size or shape. This patented PILECAP System is designed to repair severely corroded or damaged steel piling. The structural jacket becomes a permanent form for strength and durability by bearing the pile's intended load while eliminating corrosion and preventing further damage to the pile.

When transferring the load across to the structural steel jacket, this system fully restores the load bearing integrity of an existing pile. In doing so, PILECAP's Steel Pile Repair System has been proven to be a cost effective alternative to driving a new pile. The PILECAP Steel Pile Repair System adds less weight to the piling and surpasses conventional repair methods with respect to longevity and durability in comparison to older, outdated piling repair methods. The patented PILECAP Friction Coupler System is the only system able to fully restore the structural integrity of an existing pile.

If you have any further questions contact PILECAP Inc. at (913) 948-8340 or visit our website at www.Pilecapinc.com.

*The PILECOAT System has been tested to a 75+ year serviceability, US Patent No. 6.561.736
